                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CGGGGTCAGCCCCCCCAGGGCTCACCTGTGGCAGCGGGGCCCCAGCCAAGCAGCAGCAA 452
                                                                                                                                                                                                                                       This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polymocleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polymucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                     tumor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         137 AsplysLeuAsnGlyPheGlnLeuGluAsnPheThrLeuLysValAlaTyrIleProAsp

```
the above nucleotide sequences, or degenerate variants of the above nucleotide sequences. The composition and methods are useful in diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                          144 AsplysLeuAsnGlyPheGlnLeuGluAsnPheThrLeuLysValAlaTyrIleProAsp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes isolated polynuclectides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polynuclectide comprises: any of the 22 fully defined nuclectide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nuclectide sequences cited above; at least 10 contiguous residues of the nuclectide sequences cited above; at sequence that hybridise to any of the nuclectide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TS:

                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes isolated human lung carcinoma polymucleotides (1) and polypeptides (11). (1) and (11) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (1) or (11) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (1) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polymucleotide that hybridises to the oligonucleotide and comparing the amount of polymucleotide that hybridises to the oligonucleotide to a cancer in predetermined cut-off value, and determining the presence of a cancer in the patient. (1) and (11) are useful in pharmaceutical compositions, e.g. vaccines. (1) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABB09145 to ABB09486 and ABP61866 to ABP61992 represent sequences used in the exemplification of the present

```
The present invention describes human lung tumour proteins. Human lung activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polymucleotides, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polymucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABLA8959 to ABLA9300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
                              tumor polypeptides, useful for immune response.

```
for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polynucleotide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above; at least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to the above nucleotide sequences; or degenerate variants of the above nucleotide sequences; or degenerate variants of the above nucleotide sequences; or he composition and methods are useful in diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence encoded by a human lung tumour cDNA isolated from a lung squamous cell carcinomat that may be useful in the diagnosis and treatment of lung cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes isolated polynucleotides and polypeptides useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Wang T, Wang A, Skeiky YAW, Li SX, Kalos MD, Henderson RA;

                                                                                                                                                                                                                                                                                                                   The invention describes isolated polynucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polynucleotide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above, at least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to the above nucleotide sequences; or degenerate variants of the above the above nucleotide sequences; or degenerate variants of the above diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          281
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  136

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes isolated polymucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polymucleotide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above; a least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to the above nucleotide sequences; or degenerate variants of the above nucleotide sequences; or degenerate variants of the above nucleotide sequences; or the and methods are useful in diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TS;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer.

Novel lung carcinoma polynuclectide sequences and polypeptides encoded by the polynuclectides, useful in pharmaceutical compositions such as vaccines and as markers to indicate the presence of lung cancer.

Claim 9; Page 372-374; 381pp; English

The present invention describes isolated human lung carcinoma polymucleotides (I) and polypeptides (II). (I) and (II) have cytostatic polymucleotides (I) and polypeptides (II). (I) and (II) have cytostatic cativity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample trom the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of camparing the patient, contacting the biological cample with the oligonucleotide that hybridises to the oligonucleotide to a mount of polynucleotide that hybridises to the oligonucleotide to a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABP02145 to AB02486 and ABP61866 to a cancer in the exemplification of the present invention

(I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligomucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample with the oligomucleotide, detecting in the sample, an amount of polymucleotide that hybridises to the oligomucleotide to a mount of polymucleotide that hybridises to the oligomucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in planamecutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. The present invention describes isolated human lung carcinoma cativity, and can be used in gene therapy and in vaccines. Compositions computising (1) or (11) can be used for stimulating an immune response in comprising (1) or (11) can be used for stimulating an immune response in comprising (1) or (11) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of containing a biological sample the presence of a cancer in a patient, by cobtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybriddises to the oligonucleotide and comparing the amount of polynucleotide that hybriddises to the oligonucleotide to a cancer in predetermined cut-off value, and determining the presence of a cancer in corrections. (1) and (11) are useful in pharmaceutical compositions, e.g. vaccines. (1) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. AB092145 to AB092486 and ABP61866 to the contained or the present sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                      fusion
                                                                                                                                                                                                                                                                  The present invention describes human lung tumour proteins. Human lung tumour proteins and polymuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polymuclectides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CGGGTTAGGAGCCGGAAAATTCAAATCCGAAATATTCCACCCCAGCTCCGATGGGAAGTA

Human lung tumour proteins and polynucleotides have exptostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express stimulating an immune response. ABL4859 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present invention

Human lung activaties, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, polynucleotides, antibodies, proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

tumor

This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have eytoetatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting calls expressing P2 and then administered to the patient to inhibit development of cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    887
                          The present sequence represents a murine c-myc coding region determinant binding protein (CRD-BP). The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methods are used for diagnosing presence or absence of a tumor in a human, especially breast, colon and pancreatic cancer. They are also used to inhibit cancer cell growth
                                                                                                                                                                                                                                                                                                                                                  ThralavalvalvalasnvalThrTyrSerAsnArgGluGlnThrArgGlnAlaIleMetLys
